

Melbourne Sea Slug Census VII

Using your underwater camera, collect images of Sea Slugs anywhere in Victorian coastal waters!

If you're out and about in the area we want to know what you find. It's up to you how you find them, but always remember to follow safe diving, snorkelling and rock pooling practices.

Census Suggestions

1. Photos for the census are to be taken within Victorian coastal waters, between **00:01am Friday 13 March 2020– 23:59 Monday 16 March 2020**.
2. Send in **one photo for each species** of sea slug you encounter on census weekend. You don't need to identify the slugs (although please do if you can), just take their photos!
3. Photos should be cropped around the slug, shrunk to around 640x480 pixels, and submitted by email or dropbox to melbourneseaslugcensus@gmail.com by **Sunday 22 March**.
4. Emails should include the names of everyone involved in capturing the image and details of the location where photos were taken. If you collect images at more than one site please indicate which photos were taken at which site. For a photo to be considered, it must be named as:

Photographer Name_Location_Sea Slug name (if known)_Date

There will be prizes up for grabs!

Head to vnpa.org.au/sea-slugs for more details.
