

# other commonly spotted species

The Great Victorian Fish Count surveys 35 bony fish, sharks and rays found along Victoria's coastline. But there are many more fish living in our waters! Here are a few that you are likely to see on your dive or snorkel- some of them can be confused with our target GVFC species, so this having this ID sheet handy before and after a survey may help you tell the difference.

## Globefish

*Diodon nichthemerus*
